- HackerRank – 4★ in Java and Python

PROFILE

Motivated Diploma IT student with strong knowledge in web development, backend frameworks, and machine learning. Skilled in Laravel, Django, and Python, with a proven ability to build real-world applications like EventCrafter. Eager to apply my skills in a growth-focused environment.

ACADEMIC PROJECTS

EventCrafter - Event Management System

eventcrafter-2pgs.onrender.com

- Developed a full-featured event booking platform with Laravel and MySQL
- Built dashboards for Admin, Organizer, and Customer roles
- Integrated real-time analytics and booking visualization using Chart.js
- Added role-based access control, user blocking, and feedback module
- Designed responsive UI using Tailwind CSS and Blade templates
- Hosted live for public access using Render

Admission Predictor

Academic Project | Django, Bootstrap, Python

- Built a web-based admission prediction system using Django framework.
- Implemented a Linear Regression model to predict chances of admission based on user input.
- Used Scikit-learn for training and testing the model, and Joblib to save and load the model.
- Designed a user-friendly interface using Bootstrap for responsive front-end layout.
